PRIMROSES FROM SKY HOOK

The blooming sized plants offered for sale have weathered two severe Vermont winters and have vigorous root development. Planted in partial shade edging a path, as a border, in a nook or ravine, they will enhance your spring and early summer garden.

The soil should be cultivated to a depth of 8 to 10 inches and enriched with humus and well rotted or dry cow manure.

All plants dug to order and shipped by parcel post special handling, which is first class delivery. Add 15% to order for packing and shipping. Our liability in all cases is limited to replacement of plants not true to name or a refund of the original purchase price.
